

More Time for the Essentials – No More Packaging Stress!

You know the problem: you need to rollout a new version of a key business application. Everybody is waiting for it. But nobody has the time to take care of packaging, quality assurance and documentation.

Application packaging can be a very time-consuming task and requires experience and know-how, especially because it's not an everyday job. The Matrix42 Package Cloud provides a broad range of business-relevant applications as prepackaged software – at a FIXED PRICE!

Package Cloud Features

- 180+ software packages (May 2013) for business-relevant applications
- Quality-assured software packages from the German market leader
- Easy and fast provisioning as cloud service
- A dedicated team takes care of creation, updates and quality assurance
- The software packages are supplied as German and English versions
- Windows XP (x86) and Windows 7 (x86, x64) are the approved and tested platforms
- Uninstallation, reinstallation and installation can be performed with one single software package – templates can be taken from the Package Cloud
- Standard packages can be customized to address customers' individual requirements
- Automated process for updating existing software packages
- All packages available at a fixed price!

Matrix42 Package Cloud – The Original

All applications are packaged by experienced experts. Predefined rules and guidelines for creating and documenting software packages ensure consistent quality. All packages go through a rigorous quality assurance process based on the „four-eye principle“ to verify and document compliance.

You can also customise the software packages from the Matrix42 Package Cloud to address your individual requirements. Our professional services organisation is happy to help you if you need customisation support. Matrix42 also offers specific packaging training sessions. The Matrix42 Package Cloud helps you significantly reduce the time you need to implement and roll out your Matrix42 Workplace Management solution, while ensuring more efficient operations.
